

RiskInsight® Technology

RiskInsight is based on a flexible architecture that can be deployed in a variety of ways within the company firewall, including a traditional client/server or virtual machine environment. RiskInsight can also be hosted in the cloud with minimal IT support requirements.

The RiskInsight platform can be accessed from a variety of devices including desktops, virtual machines, tablets, and smart phones.

RiskInsight consultants are available to evaluate your existing workflow and IT environment, to discuss installation options, and to design and install the platform in a configuration that best suits your needs.

Flexible Architecture to Meet Your Requirements
